

# Solution Overview

## What Is Hideez Workforce Identity?

It's is a universal authentication system that allows employees to access workstations and accounts without the need to remember passwords.

Employees can unlock Windows devices and log into cloud or on-premises applications using passwordless tools certified by FIDO standards. And when the work session is over, they simply walk away – and the computer locks automatically.

### Passwordless Access

Passwordless login methods include a mobile app, passkeys (biometrics or PIN), or hardware tokens.

### Zero Trust & Compliance

IT administrators have full control and access to the event history.

### Proximity-based access

Automatic device locking and unlocking prevents unauthorized access attempts.

## Core Integrations

## Available Authentication Tools

Passkeys, credentials based on biometrics

Mobile app and dynamic QR codes

Multifunctional hardware tokens

## Key Implementations

# How We Do It Better

Unlike most vendors who only partially address access challenges, Hideez combines all authentication tools in a single solution – passwordless login, identity management, and even physical workstation security.

Instead of purchasing and integrating 2–3 different tools, organizations use Hideez to cover all their access needs and ensure compliance with GDPR, HIPAA, NIS2, DORA, and other regulations.

Identity Management, SSO

Passwordless Authentication, MFA

# What You Get

- A single authentication platform instead of multiple tools (password managers, IAM, SSO, smart cards for logging into Windows, ChromeOS, or physical facilities)
- Flexible Single Sign-On for any web services based on SAML and OIDC protocols;
- Lower complexity – deployable through **Azure Marketplace** or **Google Cloud Marketplace** as a private or public cloud environment
- Support for on-premises deployment for organizations with strict security policies

# How Others Use Hideez

## Regulated industries

Protecting sensitive data with phishing-resistant MFA and controlled access to both devices and accounts to meet security compliance.

## Dynamic environments

Workers get fast access to shared workstations and accounts – even in mobile settings like retail. Sessions lock automatically when users step away.

## SMBs

An easy-to-deploy, affordable cloud SSO with a free trial. Includes hands-on support for setup and integration with popular service providers.

## Orgs with an on-premises strategy

Supports on-premises or private cloud deployment, giving IT teams full control over data.
